Task1:

.Create a webpage with a parent container and two child elements. Use position for the parent container and the child elements. Position the child elements at the top-right and bottom-left corners of the parent container, respectively, and ensure that they remain in those positions even when the page is scrolled.

Task2:

Create a list of items. Use CSS to style the list items using pseudo-classes and pseudo-elements.

Requirements:

Apply a different background color to the list items when the user hovers over them.

Add a "new" label before the first item in the list using a pseudo-element.

Apply a different style to the last item in the list using a pseudo-class.
